NEW HYTEMP® H570 PERFORMS AT TEMPERATURE RANGES PREVIOUSLY UNAVAILABLE IN ANY ACM PRODUCT

Louisville KY - ZEON Introduces HyTemp® H570 HT-ACM, our newest grade of high-performance, sealing elastomer technology that provides excellent long-term resistance to hot, under-the-hood environments. With low temperature flexibility of -40°C (Gehman T100), continuous heat resistance to 175°C, and resistance to excursions approaching 200°C, HyTemp H570 brings temperature ranges previously unavailable in any ACM product!

Consistent performance in high-heat environments makes HyTemp ideal for automotive engine valve cover gaskets, oil pan gaskets, rocker cover gaskets, and other engine and transmission seals requiring superior sealing force retention in hot oil environments.

About Zeon

Zeon is a world leader in specialty elastomers, polymers and specialty chemicals, operating a global network of plants in Asia and North America and Research & Development laboratories in the United States, Japan, China, and Singapore.
